

Innovile Professional Services

Let us improve your network performance and customer experience

Innovile provides a range of professional services for Mobile Network Operators. We offer a wide range of expertise and delivery formats to ensure that your mobile network runs smoothly and is fully optimized. We know that your time and resources are precious, so our team offers network expertise on demand to augment resources, deliver specific results, or manage operations. Critical projects and skilled resource availability are no longer a concern with our flexible and cost-effective service options.

Our professional services include:

Managed Services

Let our expert team manage your network automation and optimization needs. You can also reach out to us for full network planning and management outsourcing or team augmentation for specialized functions. We create an operational dynamic that allows flexibility and scaling while ensuring top-tier skills and outcomes.

Our managed services include network planning of 3G, 4G, and 5G networks, implementing new technologies, network dimensioning, refarming the spectrum, adding features and capacity, and designing the entire network, among others. We also carry out network coverage optimization, network operations, alarm management, and specialize in network performance uplift to improve customer experience and return on investment.

You can also bring in our teams to audit and assure the radio access network, including city, single-site, route, and cluster-based drive testing. We also do benchmark testing for technology, the grid, carriers, and operators, among other managed network services.

Benefits of Our Managed Services

- Enables operational flex and scaling without having to hire and fire internally.
- Top-tier and niche skills are readily available and can be assigned to specific needs.
- Combines expertise and technology to achieve proven results and operational efficiencies.
- Cost-effective, ongoing results.

SMART Projects

When great software and expertise come together, you get the tools and knowledge to investigate, discover, resolve, and enhance your network. Our project-based approach combines our consulting and engineering skills with technology to rapidly deliver targeted results.

Our SMART projects service leverages proprietary tools and essential knowledge to pick, analyze, and correct network-related issues using our tools, which include performance management, fault management, configuration management, and self-organizing networks.

With our SMART projects, we can audit, check the health, optimize, and reconfigure your complex networks for quality performance, ease of operation, cost reduction, and customer experience.

What Are the Benefits?

- We deliver rapid and targeted results to drive specific objectives.
- Our technology and skills combine to enable the delivery of complex projects.
- Keep in-house resources focused on the day-to-day whilst leveraging our project skills.
- Transformation, optimization, and rollout specialization assure benefits.

Consulting Services

Over the years, we've provided our expertise to customers in many aspects of network management, automation, and performance. You can rely on us to handle special projects, long-term assignments, and related expertise to make it happen. Our teams have global, hands-on experience in network assurance consulting with amazing results. We keep up-to-date with the latest technologies and case studies to stay on top of our game and are often leading the field in innovative new ways to improve network operations. Real experts creating real value.

Benefits of Using Our Consulting Services

- Enhance internal team knowledge and capability whilst delivering results.
- Supplement your resource pool and skills with on-demand, globally experienced expertise to fast-track the realization of your goals.
- Targeted, cost-effective resources ensure positive outcomes.

Why Using Trusted Third-Party Resources Makes Sense

Using our expert resources makes a lot of sense.

- Access a pool of expertise and experience without the cost of hiring such talent at the workplace.
- Get an independent expert perspective that can see issues you may have overlooked or failed to address.
- Fill skill and resource gaps using different budget lines.
- Leverage external knowledge to develop internal talent building a stronger workforce.
- Improve productivity and reduce costs of operations.
- Enable core team to focus whilst ensuring scalability and performance.

Case Study

With a complex, multi-vendor environment, a Ukrainian Tier-1 mobile network client requested our help in radio frequency allocations and assignments: radio spectrum re-farming, with the implementation of 4G requiring 50% of the available 2G-3G spectrum.

The re-farming project had a 9-month cycle in line with 4G rollout key phases. The project was a great success, enhancing network coverage by 20%. We streamlined operations, improved coverage, and reduced complexity, leading to a better and more cost-efficient network.

“It was a complicated project delivered over a tightly defined timeframe in a complex environment. The result is enabling us to make optimum use of our spectrum, improving our return on assets and securing customer experience”.

Director of Network Planning & Quality Management

Optimize your network today with trusted professional services from Innovile. Contact us today and get the results you deserve.
