

Innovile Performance Management

Monitor and boost network performance

As 5G continues to transform the mobile landscape, monitoring the performance of complex multi-vendor and multi-technology networks becomes increasingly challenging. Innovile Performance Management equips you with an open and flexible platform to improve visibility of your end-to-end network performance to drive operational excellence.

Ease of Use

Intuitive interface allows easy access to performance management metrics, spanning topology and services. Integrating complex statistical network data 24/7 into a single platform enriches data comparison options and simplifies performance visualisation with mapping to facilitate network planning and monitoring efforts.

Timely Troubleshooting

KPI and metrics tracking and management toolset, a component in each of Innovile solutions or as a stand-alone option.

Simplified Reporting

KPI and metrics tracking and management toolset, a component in each of Innovile solutions or as a stand-alone option.

Expert Services

Innovile Expert Services are available to define, set up, operate and optimise your performance management solution and operational practices.

Innovile is the leading global independent provider of smart network management and optimisation solutions and services. Leveraging dedicated industry expertise and state-of-the-art technological capabilities, Innovile provides a wide range of innovative and future-proof portfolio of self-organising network, configuration management, performance management and expert services that empowers mobile network operators with real-time network intelligence and operational dynamics to streamline their business to improve customer experience, boost efficiency and unlock revenues. The company is headquartered in Izmir, Turkey, has a branch office in Barcelona and representation in Istanbul, Madrid and Bogota.

Key Features of Innovile Performance Management

GENERAL FEATURES

- Mobile compatible modern web interface
- Multiple language support
- Map (GIS) Support
- Vendor free architecture
- Technology free architecture

MAP

- Clear cell display for all technologies
- Thematic views for
 - Parameters
 - KPIs
 - Physical node data
- Neighbour analysis
- SON action analysis

TRENDS

- Detailed KPI investigation
- KPI library
- Customisable chart
- Aggregated views
- Summary views

SON REPORTS

- Recent and historical SON actions (displayed in powerful tabular, graphical and map views)

DASHBOARD

- One screen to monitor all network

ANOMALY

- Abnormal cell behaviour analysis
